

PROFESSIONAL SUMMARY

Software Engineer with a strong foundation in backend architecture, REST API design, and OOP. Brings practical engineering experience from working with enterprise-scale banking systems, including API workload simulation and performance analysis across 150+ endpoints, which has deepened a strong understanding of how production web systems behave under real-world conditions. Demonstrated ability to independently design and ship full-stack projects, with a fast-learning approach to new languages and frameworks.

WORK EXPERIENCE

East West Banking Corporation

Software Test Engineer

Aug 2025 – Present

Makati City, PH

- Led end-to-end performance testing for 4 enterprise banking systems, including fraud detection integrations for core banking transactions, customer-facing web platforms, cash management applications, and RPA-integrated internal service workflows, supporting thousands of concurrent users, owning test planning, scripting, execution, and analysis across production-like environments.
- Designed JMeter test suites simulating 50–100% peak load across **150+ REST API endpoints**, replicating real user flows using **dynamic correlation, regex extraction, and parameterization**; bottleneck analysis contributed to **~25% performance improvements**.
- Authored 40+ reusable Groovy scripts** in Katalon Studio for automated test data generation, **reducing preparation time by ~80%**; automated headless JMeter execution and reporting via **Bash**, cutting manual effort by ~40%.

PROJECTS

Policy Tracker API & Dashboard

Tech: C#, ASP.NET Core, Entity Framework Core, PostgreSQL/SQL Server, Angular, TypeScript

- Built a full-stack insurance policy management system using ASP.NET Core Web API and Angular, implementing CRUD operations for policy records with a layered architecture (Controller → Service → Repository).
- Used Entity Framework Core for ORM-based data persistence, mapping C# domain models to database tables and managing schema via Code-First migrations.
- Developed an Angular frontend with component-based architecture and HttpClient services to consume the REST API, displaying and managing policy data in a responsive list/form interface.

Object Storage Service (S3 Clone) | [\[Github\]](#)

Tech: Java, Spring Boot 3.5, Spring Data JPA, PostgreSQL, Docker, REST APIs, Swagger/OpenAPI

- Designed and developed an Amazon S3-inspired object storage service in Java and Spring Boot, implementing full CRUD operations for buckets and file objects through RESTful APIs following a 3-layer architecture (Controller, Service, Repository) with clear separation of concerns.
- Applied the Repository Pattern via Spring Data JPA/Hibernate for database abstraction, UUID-based filename collision prevention, recursive directory management, and centralized API error handling using `@RestControllerAdvice` and RFC 7807 Problem Details.
- Containerized the application and database with Docker, automated schema management via Hibernate DDL, and documented all REST endpoints using Swagger/OpenAPI; currently implementing JUnit 5 unit and integration tests across service and repository layers.

Lore of Legends – Interactive Story Generator | [\[Demo\]](#) [\[Github\]](#)

Tech: FastAPI, React, PostgreSQL, SQL Alchemy, LangChain, Google Gemini LLM, Pydantic

- Built a full-stack interactive story generation platform using FastAPI and React, enabling users to generate and navigate LLM-powered branching narratives with multiple dynamic endings.
- Engineered an **asynchronous job-processing pipeline** using PostgreSQL, SQLAlchemy, and FastAPI background task polling to handle long-running Google Gemini (LangChain) inference without blocking API requests.
- Enforced **deterministic tree-structured JSON generation** using Pydantic validation and LangChain structured output parsing, transforming LLM responses into recursive graph-based story paths.

Zealia - RIASEC Team Matching Website | [\[Github\]](#)

Tech: PHP, MySQL, JavaScript, Server-Sent Events (SSE), RBAC

- Developed a full-stack MVC application in PHP and MySQL implementing a RIASEC-based team grouping algorithm, **RESTful JSON API endpoints**, and **10+ route groups covering auth, admin, real-time notifications**, and CRUD workflows.
- Enhanced real-time responsiveness via **Server-Sent Events (SSE)** for live notifications and implemented **role-based access control (RBAC) system** for secure multi-user management and protected workflows.

EDUCATION

Our Lady of Fatima University

Bachelor of Science in Computer Science

July 2025

Valenzuela City, PH

- Dean Lister (2023)

LEADERSHIP & ACTIVITIES

Junior Philippine Computer Society | *Member* (Oct 2023–July 2025) / *4th-Year Representative* (2024–2025)

- Coordinated student events** and organizational initiatives, managing logistics, booth operations, and event setup/teardown.
- Designed promotional materials** (posters, banners, graphics) to increase campus engagement and support computing-led activities.

CERTIFICATIONS & TRAININGS

- PCAP: Programming Essentials in Python* - Cisco Networking Acad. & OpenEDG Python Institute (Dec 2022)
- Cisco Certified Support Technician (CCST) – Cybersecurity* - Cisco (Apr 2025)
- Introduction to Software Engineering* - IBM (Dec 2024)
- Intermediate Python* - DataCamp (Jun 2025)

SKILLS

- Programming Languages:** Java, Python, PHP, JavaScript/TypeScript, C#, SQL, Groovy
- Backend & APIs:** Spring Boot, Spring Data JPA, REST APIs, OOP, FastAPI, SQLAlchemy, Pydantic, LangChain
- Frontend:** React, Angular TailwindCSS
- Databases:** PostgreSQL, MySQL, SQL Server, Supabase, Neon
- Testing & Automation:** JUnit 5, JMeter, Katalon Studio, Soap UI, API Load Testing, Test Automation
- DevOps & Deployment:** Docker, Vercel, Render, Railway
- Tools & Monitoring:** Swagger/OpenAPI, Grafana, Postman, Git, Figma, Notion
